## **Global Knowledge Exchange Announces the Launch of “GKE Project *Readorium*” for 21<sup>st</sup> Century Literacy Instruction**

Global Knowledge Exchange Inc (GKE) is pleased to announce the formation of a partnership with Mtelegence Corp. Mtelegence has developed a breakthrough teaching and learning technology. It's a modern cloud-based reading-to-learn system designed to help students meet the U.S. Department of Education (DOE) Common Core Standards in the areas of both science and literacy. Students who master *Readorium*'s interactive lessons are able to read informational books and articles of all kinds, including science, with improved understanding.

*Readorium* consists of two products, *Readorium* Rising Reader (RRR) and *Readorium* Scholar (RS). They are modular, scalable, and highly interactive systems and they automatically adapt to the needs of different kinds of learners. They are suitable for students in grades 3-12, for vocational and college students, as well as for working age adults looking to upgrade their literacy skills. These systems belong in reading, science, ESL, teacher professional development, continuing education, and professional studies classrooms. These systems will also be useful additions to any new or existing GKE “Global Classroom” (GC).

The skills and strategies that students learn by using *Readorium* will help them better comprehend text in other languages as well. In addition, these reading skills are transferable to all subjects, so students' increased level of comprehension will prepare them to also study medicine, business, law, engineering or any technical field where complex informational text and difficult words must be read and understood.

**More about GKE:** GKE is a platform for education and knowledge exchange. GKE exists to serve its member organizations, including schools, universities, corporations, and government groups. Many members are recognized leaders in education and training. GKE describes its network as a “human network”. This description differentiates the GKE network from the many “technology networks” already in existence. GKE's members complement each other and sometimes pool resources. They are able to accomplish more collectively than they could individually. GKE is interested in working with education and training organizations worldwide, including Europe, the Mid East, and the Caribbean. However, GKE has a particular interest in building links between the U.S. and Far East. *NOTE: Mtelegence Corp.* recently became a member of the “GKE Global Alliance” community. The new *Readorium* systems will likely interest the GKE membership base. In addition, The *Readorium* program will be a suitable component in GKE's “Global School 21” projects.

**More about *Readorium*:** *Readorium* programs are designed for independent student use. The programs are “smart,” adaptive, cloud-based fully integrated solutions designed to supplement the regular curriculum and teach students how to extract deep understanding from any nonfiction text. The special focus, however, is on the sciences. *Readorium* programs are aligned with the Next Generation Science Standards and the Common Core State Standards (CCSS). Virtual “mentors” lead students through interactive lessons and in-depth content reading. The system teaches the strategic thinking needed to understand difficult non-fiction and technical texts and helps users become self-reliant readers. Students automatically and continually receive text at the level of difficulty appropriate to their current abilities. The company founder, Harriet Isecke, will also serve as a master educator and literacy consultant under the GKE-incubated Global Teacher Academy (GTA).
